## Remarks

- The load capacities stated are valid for lifting operation only (corresponding with crane classification according to ISO 4301-1, crane group A1).
- Machine is standing on firm, horizontal ground.
- The weight of the lifting device (pulley block, hoist ropes, shackles etc.) must be deducted from the load capacity.
- Additional equipment on boom (e.g. walkways) must be deducted from the load capacity.
- The max. admissible wind speed can be preselected in the LML software and referred to in the load chart.
- Working radii are measured from centre of swing and under load.
- The lifting capacities are valid for 360 degrees of swing.
- Calculation of stability under load was carried out according to ISO 4305 Table 1 + 2 + 3, tipping angle 4°, as well as ANSI/ASME B 30.5 and was tested according to SAE J765 and SAE J987.
- The structures are calculated according to EN 13001-1; EN 13001-2.
- Weights may vary depending on the delivered configuration of the machine filling level of the tanks as well as generally valid tolerances.
- The figures in this brochure may include options which are not within the standard scope of supply of the machine.
- Subject to technical change without notice.

# Concept and characteristics

---

### High performance

A strong, efficient and reliable diesel engine of the newest generation provides high performance and enables several movements to be carried out simultaneously.

### Ground pressure

The actual ground pressure is calculated according to the configuration and position of the machine and displayed in the operator's cabin. Using the optional Liebherr Crane Planner 2.0 the actual ground pressure can already be calculated and displayed in the planning stage.

### Cabin with high comfort

Optimised field of vision combined with enhanced comfort: an orthopaedic operator's seat with heating and cooling functions, as well as precise and ergonomic controls are included. Air conditioning is optional.

### Control system

Easy and intuitive handling of control, service and machine functions through a large, clear colour monitor. Built for extreme environmental conditions.

### Travelling with load

By preselecting one of the three travel speeds, the control automatically applies the permitted load curve.

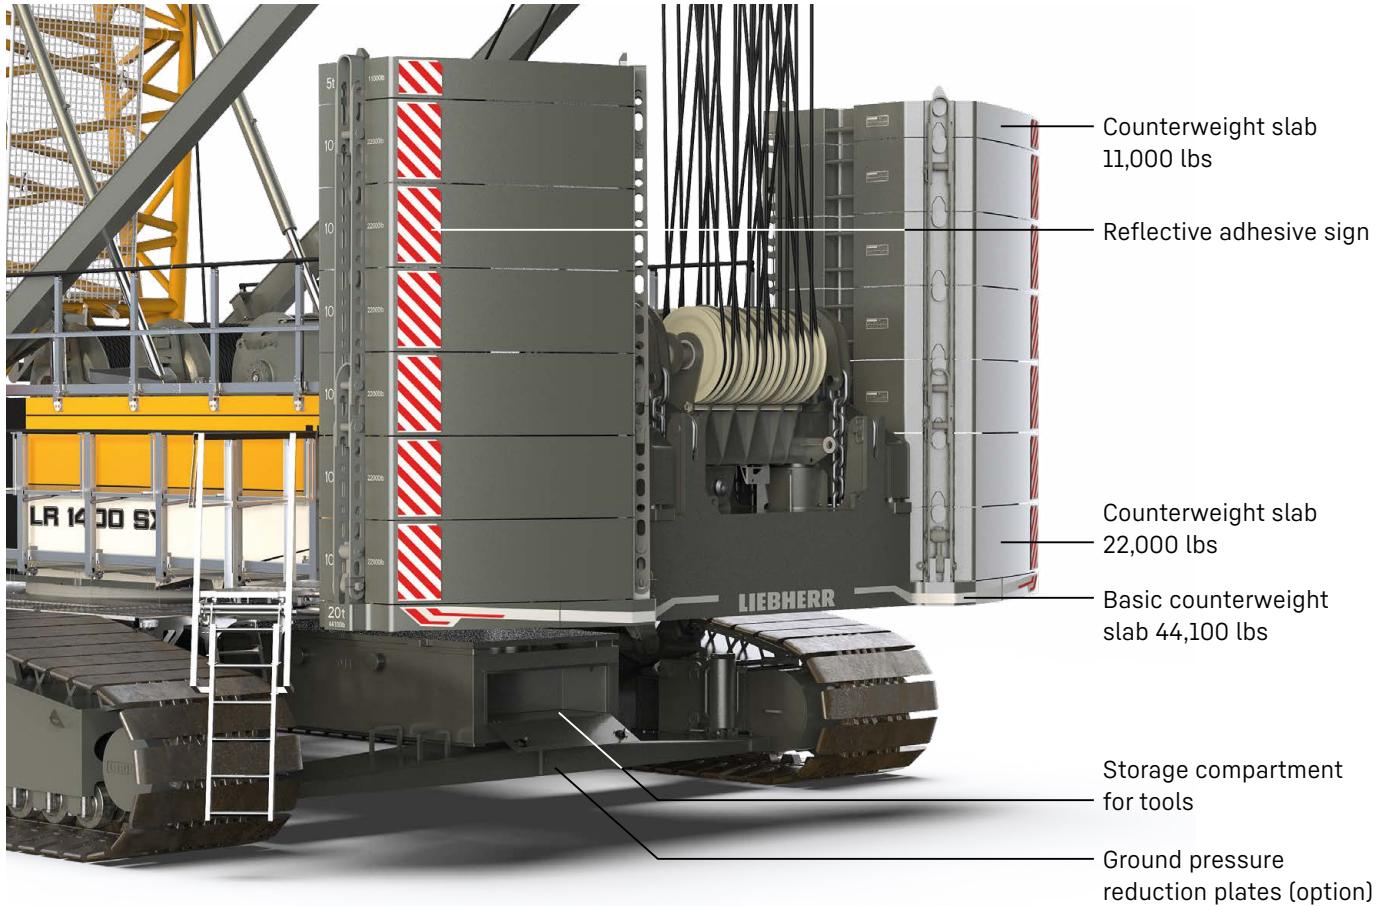

Stage 1: up to 3.94 inch/s

Stage 2: up to 15.75 inch/s

Stage 3: more than 15.75 inch/s

### Barge operation

By preselecting the barge inclination the control automatically applies the permitted load curve.

#### **Efficient self-assembly system and short assembly times**

The optional self-assembly system enables safe, independent and quick assembly/disassembly of the crawler side frames, the carbody and rear counterweights, the two hoist winches, as well as boom elements.

#### **Mobility**

Crane parts are optimized for transportation. The maximum transport width is 9.8 ft.

#### **Easy service**

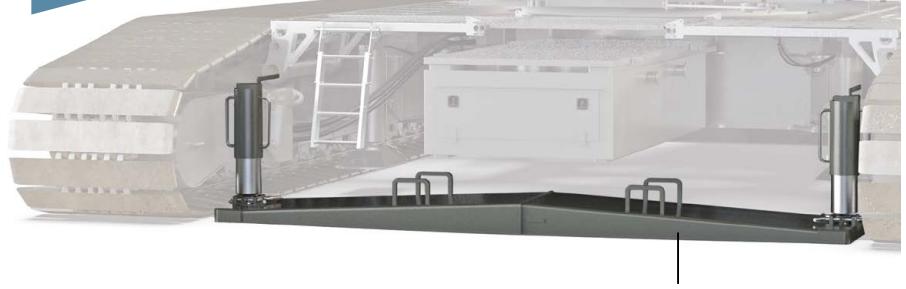

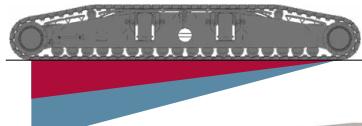

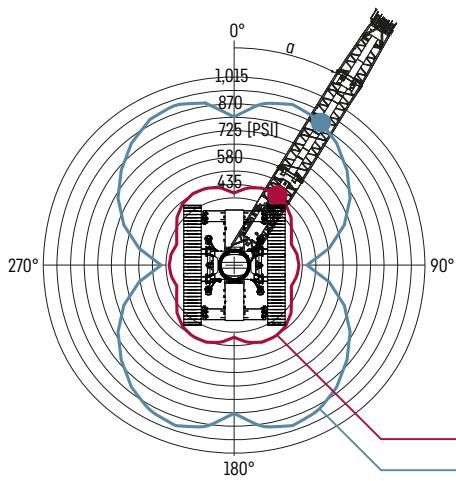

The design ensures easy maintenance and service as well as safe access to the components.

#### **Boom/jib**

A variety of boom systems and configurations allow for optimum operation on the most diverse jobsites.

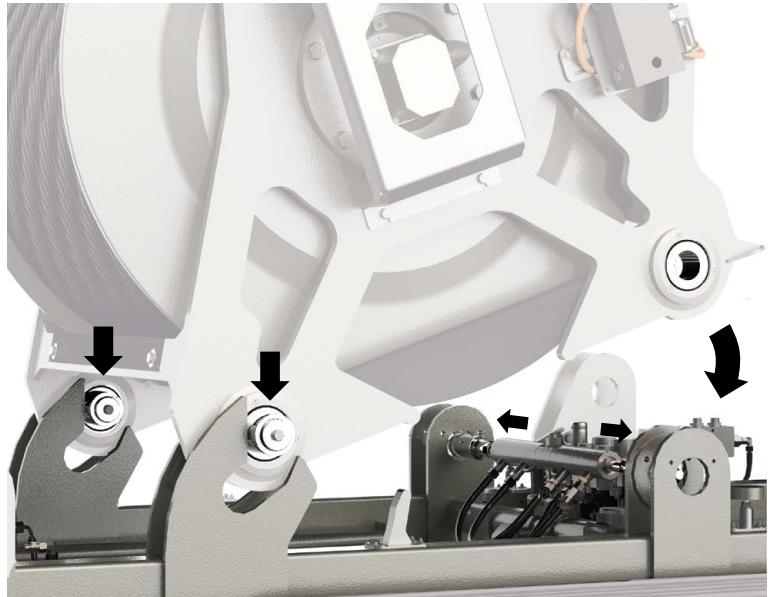

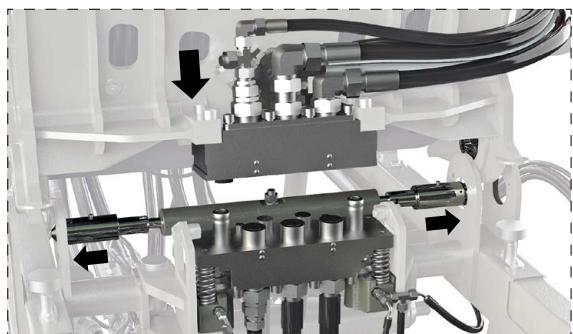

### Reduction of ground pressure (option)

With the help of the new hydraulically activated ground pressure reduction plates, the ground pressure can be reduced by up to 56 %.

### Quick assembly of hoisting winches

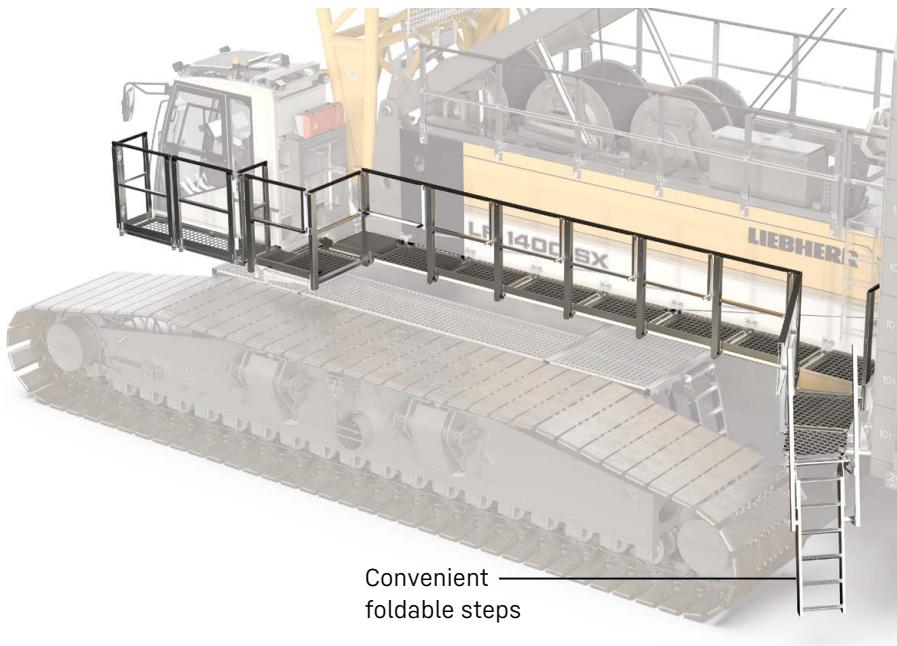

Winch installation and removal can be carried out within seconds thanks to the integrated self-adjustment in the winch frame, as well as the hands-free quick connect, which has been used for many years in the toughest of applications.

The winch guides and locks itself during installation.

## Cabin access

Safe and non-slip direct access to the cabin is via convenient foldable steps and continues on illuminated platforms. For the first time, access is no longer via the track pads, thus we fulfil the highest possible safety standard.

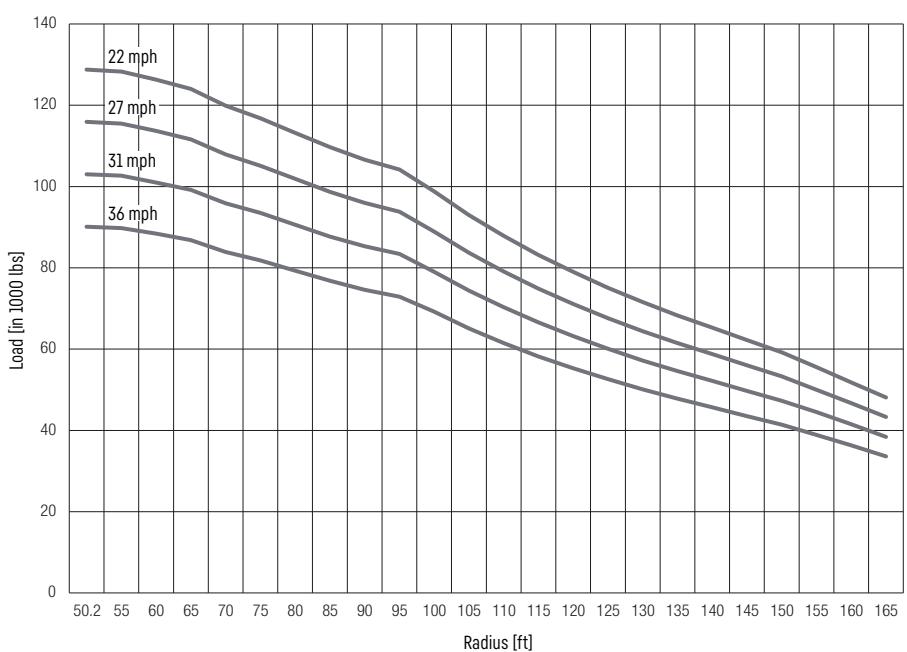

## Preselection of customised load curves

### Curves

Different wind speeds. The driver can preselect appropriate and permitted load curves for different wind speeds by pressing a button directly on the monitor.

In the same way different barge inclinations or travel speeds, or even "grab operation" and further operation modes can be selected. In all cases the control system automatically assigns an appropriate permitted load curve.

The above diagram shows an example of the selectable load curves for different wind speeds.
