Two Crane Tango

Why use two cranes? Two cranes make it easier to compensate for an offset center of gravity. This electrical building was heavier on one corner. By using two cranes and adding some additional rigging on one side, our crews were able to pick and set the building level. With our excellent engineering team and our savvy rigging crew, we can execute the most complicated picks.

Utilizing the Gantry

Tight Quarters Demand Unique Tools

SAFETY SCHOLARSHIP

"What Safety Means to Me"

Anyone Seeking Higher Education
In Any Trade or Field is Eligible!

1st Place: \$1,000
2nd Place: \$500

Downtown Demo

Demolition work can often be more challenging than new construction. Unknown weights, a lack of lifting lugs, and insecure and aging materials all compound to make the job challenging. This is where extra planning, detailed engineering, and experience combine to make the job successful.

Safety Strong, Safety Share

The two most common and riskiest behaviors behind the wheel are:

1) Speeding and 2) Failure to buckle up.

Following the speed limit and putting on your seat belt greatly reduce your risk for bodily harm or death in an accident.

Be safe, slow down & buckle up!

Bryce Olsen, Field Safety Manager

The core of Mountain is a top notch crew who is committed to SAFETY and executing every job with professionalism and precision. We are proud to be Mountain strong.
